PRESENTATION

According to the World Health Organization (WHO), vaccines prevent approximately 2-3 million deaths each year.

Vaccines are one of the most effective and efficient means of preventing infectious diseases, ranging from acute diseases (measles or polio) to chronic diseases (such as chronic hepatitis B) and some virus-related cancers such as liver cancer and cervical cancer.

Continued evaluation and communication of scientific data on vaccine safety is essential to ensure confidence in vaccination programs.

TARGET

The course is aimed at primary care, pediatrics and gynecology specialists, as well as nurses and general health professionals involved in vaccination programs.

OBJECTIVES

Understanding the vaccines security analysis.

Knowing the efficacy and safety of vaccines against influenza, measles and HPV by providing scientific evidence.

METHODOLOGY

Online course structured in five theoretical and educational videos, followed by a debate between the authors.

It is necessary to pass the final evaluation with a score equal to or greater than 70% to obtain the accreditation certificate.

CONTENTS

Vaccines & vaccine hesitancy. Safety & efficacy considerations Bosch, F. Xavier PhD, MD 10min

Human Papillomavirus: Vaccine effectiveness and safety Bosch, F. Xavier PhD, MD 35min

Measles: Debunking the myths Martínón-Torres, Federico PhD, MD 44min

Influenza: Principles, (some) problems and (few) solutions Trilla, Antoni PhD, MD 35min

General issues on vaccines and vaccination Vorsters, Alex PhD 36min

PANEL DISCUSSION

The value of vaccines and the importance of building vaccine confidence 80min
Bosch, F.X. PhD, MD(moderator)
